DETAILED ACTION

Acknowledgement is made of the receipt of the IDS.

Claims 1-22 are pending. Claims 1-22 are rejected.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ross *et al.* (US Pat. No. 5,603,925) in view of Tsubaki *et al.* (US Pat. No. 5,472,686).

Ross *et al.* teach the use of a cosmetic composition and method comprising a polyamide gelling agent (2-40%), an antiperspirant active ingredient and a solvent system wherein a combination of a polar solvent (water) and a non-ionic surfactant (5-30%) act as a dispersing medium to form an emulsion (see entire reference). The use of colorants, emulsifiers and volatile oils are also taught. Ross *et al.* are deficient only in the sense that they do not expressly teach an alkylene oxide stabilizer in their formulation.

Tsubaki *et al.* teach the use of cosmetic formulations comprising an alkylene oxide wherein the formulations can be used in deodorants, lipsticks and mascaras (see reference column 5, lines 46-67); (column 6, lines 26-67) and (column 7, lines 1-7).

Therefore it would have been obvious to one of ordinary skill in the cosmetic art at the time the invention was made to use alkylene oxide in antiperspirants, lipsticks and mascaras, with the expected result of obtaining a smooth and durable cosmetic composition for the skin.

There is no criticality seen in the instantly claimed terminal end group of the polyamide resin since the polyamide functions as a gelling agent in the formulation. The burden is shifted to the Applicant to show some criticality in the specified terminal end group.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Humera Sheikh whose telephone number is (703) 308-4429. The examiner can normally be reached on Monday through Friday from 7:00A.M. to 4:30P.M.
